**Serology**

Test	Result	Unit	Method	
Covid-19 IgM	0.14	Index	ELISA	Negative:<0.9 Borderline:0.9-1.1 Positive:>1.1
Covid-19 IgG	0.11	Index	ELISA	Negative:<0.9 Borderline:0.9-1.1 Positive:>1.1

Comment:

Negative results do not rule out SARS-COV-2 infection, particularly in those who have been in contact with the virus. Follow-up testing with a molecular diagnostic test should be considered to rule out infection in these individuals.

Borderline results should be repeated in 7-10 days to determine definitive serological status.

IgM positive result suggests exposure to SARS-COV-2 infection recently, and IgG positive result does not necessarily indicate immunity.

Results from antibody testing should not be used as the sole basis for diagnosis or exclusion of SARS-COV-2 infection.
